THE
ANNUAL REPORT OF THE COMMITTEE OF
VISITORS OF THE COUNTY LUNATIC ASYLUM AT
STAFFORD,
PRESENTED TO THE
COURT OF QUARTER SESSIONS DECEMBER 30th, 1872.

THE Annual Report of the Committee of Visiting Justices at the County Lunatic Asylum at Stafford states, that 705 Lunatics have been under treatment from the 1st of January, 1872, to the present time, of which number 204 have been admitted, 116 have been discharged, and 69 have died.

At the present date there are 520 Pauper Lunatics resident in the Asylum at Stafford, and 400 at the Asylum at Burntwood, making a Total of 920 Pauper Lunatics belonging to the County of Stafford, now under treatment in the two County Asylums.

The numbers admitted since the last Report are rather less than in former years, although in excess of the average of admissions in many Counties;—the average of recoveries upon those admitted has amounted to 51 per cent., and the average of deaths to 9 per cent. upon those under treatment.

The large number of recoveries and the comparative small amount of admissions have enabled your Committee to give accommodation to all Lunatics requiring admittance, without finding it necessary to transfer from one Asylum to another. At the present time there are 20 beds vacant in the Asylum at Stafford.

The Commissioners of Lunacy have visited the Asylum recently, and have made a satisfactory report, which has been submitted to the Committee.

The extensive spread of Small Pox in the early part of the year compelled your Committee to continue the refusal of admission to Lunatics from infected districts ; but latterly from the abatement in the disease, it has not been considered necessary any longer to continue such regulation.

The inmates of the Asylum who, from being either in a Chronic condition or in a state of Idiocy, are permanent residents, have been exempt from any complaints of an epidemic or local kind ; whilst the deaths have taken place chiefly in Lunatics recently admitted in an advanced stage of disease, or in extreme old age.

Plans and Estimates have been prepared by the County Surveyor for the supply of two new Boilers, of larger dimensions, in the place of the four small ones now in use for the supply of steam for the use of the Asylum.

These plans have been submitted to the Committee, but after due enquiry, they have deferred the consideration of the same to a future time.

During the year your Committee have continued to give much time and attention to the supervision of the Asylum ; and at their visits have found the duties carried on with order and regularity, and the various officers and servants attentive and vigilant.

Signed,

A. C. Talbot,

CHAIRMAN.

REPORT OF THE COMMISSIONERS IN LUNACY.

Stafford County Asylum,
13th December, 1872.

UPON our visit to-day we have inspected all parts of the Asylum and seen all the Patients, 522 in number—viz., 269 males and 253 females.

Since the 12th July, 1871, the date of the last visit, 156 males and 141 females have been admitted, and 81 males and 84 females discharged (all but 4 of the former and 5 of the latter having recovered), and 56 males and 49 females have died. With three exceptions, the deaths were from ordinary causes: those from General Paralysis, 21; other Diseases of the Brain, 36; and Epilepsy, 11. The exceptions, which were fully reported to our Board, were—(1) a male drowned in a brook into which he fell in a fit, and (2 and 3) females choked with food, one whilst the attendant was feeding her. Inquests were duly held in all the above cases, and verdicts returned of “Accidental death.”

Post-mortem examinations were held altogether in 17 cases only, friends generally objecting.

The weekly rate for maintenance was in September last raised from 8s. 9d. to 9s.

There are now in the Asylum not more than 8 vacant beds in each division.

The sanitary state of the Asylum is at present good, the Patients registered as under medical treatment being only 18 in the male division and 13 in the female.

There has not since the last visit been any instance of mechanical restraint or seclusion.

Divine Service in the Chapel is attended on Sundays by about 160 males and 150 females, and on week days by only 20 fewer of each sex.

The latest ward returns shewed that the Patients usefully employed were 187 in the male, and 153 in the female division. Of the former, 80 worked on the land and farm, 34 at trades, 10 in the laundry and kitchen, and 63 in the wards, &c. Of the latter, 60 were engaged in needlework and knitting, 23 in the laundry department, 12 in the kitchen and offices, and 58 in cleaning the wards and otherwise assisting the attendants.

From 60 to 70 male Patients are taken out for long country walks on Sundays, and about 50 of the females on Sundays and three other days in the week.

The arrangements for recreation and amusement in and out of doors, and the provision and distribution through the wards of books, and illustrated and other periodicals, continue substantially as heretofore. There are monthly dances; and the Band plays in the Hall in the evenings weekly, males only being present at the concerts, after which they have supper. As many as 380 Patients have been assembled at the monthly dances. During the summer months the Patients, as before, enjoy occasional excursions, pic-nics, and dances on the green.

At the time of our visit two Patients only in the male ward No. 1, and one in the corresponding female ward

were violently excited. The demeanour of the Patients generally was quiet and orderly; and from no Patient did we receive any complaint of ill-treatment or unkindness on the part of the attendants or otherwise.

The personal condition, as to clothing and cleanliness of the Patients of both sexes, was satisfactory. We found the beds and bedding throughout, which are very good and abundant, in the best order.

The several corridors, day-rooms, and dormitories were remarkably clean, and the ventilation everywhere was good. The corridors were without fires and were cold.

Much has been done since the last visit in the way of general renovation and additions to the furniture &c. In almost all the day-rooms cork carpeting, which is stated to be durable and to answer well, has been laid down. We may also mention, as a very desirable improvement, the padding the ends and sides of all the low beds (not previously so fitted) occupied by Epileptics.

In reference to the last report, we have to state as follows:—The same number of Patients as before receive instruction in the Schools on three days weekly. Many additional walks have been formed on the estate. The night attendants are still one only in each division, and we regret that the Committee have not adopted the suggestion of adding to their number. We are of opinion that two more are necessary for the due supervision, especially of the large number of Epileptics and of the Suicidal Patients. No steps have as yet been taken towards carrying out the recommendation of providing a detached Cottage Hospital for contagious diseases. The chief ward attendants have now in their hands lists

of the Patients under their charge, with their dates of admission. The female ward No. 1 has been improved in aspect by fresh painting and colouring and decorations, and more furniture of a comfortable kind has been introduced into the wards No. 1 in each division.

We were present in the Hall during dinner, which consisted of beef, bacon, and parsnips &c., bread and beer. It was comfortably served, and the male Patients who partook of it, and whose conduct was most orderly, were 195 in number.

R. W. S. Lutwidge, } Commissioners
Robert Nairne, } in Lunacy.

ANNUAL REPORT OF THE SUPERINTENDENT.

THE number of Lunatics admitted into the County Admissions. Asylum at Stafford in 1872 were 204, consisting of 104 Males and 100 Females.

The admissions are 28 less in amount than those of the preceding year, but taking into account the 71 admitted direct to Burntwood, it will be found that in no former year, since the opening of the Asylum in 1819, have so many Lunatics belonging to the County of Stafford been admitted for treatment.

The analysis of these admissions shews that many of them are not brought for the first time, and that in a few instances the Lunatics have been re-admitted frequently in consequence of relapses in the disorder having occurred, even after an interval of several years.

Of the above number of admissions, 55 were brought in a state of Acute Mania, in most instances very violent and unmanageable, and frequently at the same time greatly exhausted. When admitted such Lunatics are generally under restraint and suffering from want of food, which they have probably refused for many days previously.

On the 1st of January, 1873, there were under treatment in the Asylum 517 Lunatics, of which number 265 were Males and 252 Females; the average of residents throughout the 12 months being 510.

Numbers.

Although the admissions in 1872 were less in amount than the preceding year, still the numbers under treatment December 31st of the present year exceeded those of 1871 by 16, the difference in the amount being accounted for by the smaller number of deaths in the last year and by the fact of none having been transferred to the Asylum at Burntwood in 1872.

Discharges.

116 Lunatics have been discharged since the last report, of which number 106 were considered recovered; although probably at some future time relapses in many of these cases may render their re-admission necessary.

Re-admissions.

Of the 204 admitted, 32 had at some former period been inmates of the Asylum. It is found that after several times returning for treatment the disorder becomes permanent, and the Lunatics have then to pass the remainder of their lives within the Asylum; sometimes subsiding into a chronic state of Mania, and sometimes falling into a state of Dementia or Melancholia.

Form of Insanity in those admitted.

The nature of the Insanity in those admitted varies but little from that of former years—the cases of Acute Mania being rather less numerous than in 1871 and those of Dementia rather more.

The difference in these numbers is only accidental, and no deduction can be formed as to any alteration in the type of the disorder; except that a larger increase in the permanent residents may be anticipated, this class being principally formed from Lunatics who have fallen into a chronic state of Imbecility or Dementia.

Recoveries.

The majority of recoveries occur in Lunatics

who are brought to the Asylum in a state of Acute Mania ; whilst in those who are found on admission to be either affected with Dementia or long-continued Melancholia, the prospects of recovery are but slight.

In forming an estimate of the probability of recovery, the causes of the disorder must materially influence the opinion. Reference to the subjoined Tables shews, that cases arising from Hereditary Predisposition are exactly similar in amount to those of 1871 ; that those from Intemperance, Epilepsy, and Diseases of the Brain differ but little in number ; while those from Puerperal Complaints are somewhat less than in the former year.

Notwithstanding the unfavourable mental and bodily state of those received in the Asylum since the last report was published, the numbers discharged have been greater in proportion than those of the preceding twelve months, giving an average of 51.96 per cent. on the admissions ;—a much larger average than that of many of the preceding years, and which would be highly satisfactory could such recoveries be considered permanent.

32 cases of re-admissions have occurred in Re-admissions. Lunatics who at some former period have been under treatment in the Asylum ; of this number, 6 only were re-admitted within the year, and several after long intervals ; one having occurred after a residence at home of 22 years, and another after 14 years.

After a moral and medical treatment for a Relapses. longer or shorter period, Patients generally become

sufficiently convalescent to warrant their discharge from the Asylum ; but for a considerable time after leaving, the brain may not regain its full state of health, and does continue peculiarly susceptible to any deviation from the strictest sobriety, or to excitement of any kind. To persons thrown after discharge upon their own resources, or with injudicious relations or friends, a relapse may naturally be anticipated, and very frequently occurs. Many of the re-admissions have been found to have resulted from such causes, and, either from the confessions of the Lunatics themselves, or the reluctant admissions of friends, have been clearly traced to a return to habits of intemperance or dissipation of any kind.

Such is not, however, always the cause for relapses ; privations, and occasionally even starvation from inability to procure work or want of power to execute it, frequently fully account for the return of the disorder.

Deaths.

The deaths during 1872 amounted to 72—namely, 44 Males and 28 Females, being 18 in number less than in 1871, and giving an average of 10.21 upon the total number under treatment in the house.

Health of Inmates.

From the large amount of rain which has prevailed during the year, and from the peculiar situation of the Asylum, much illness might have been expected, but the health of the inmates has, on the contrary, been singularly good ; and this, together with a total exemption from serious accidents, suicides, or Diseases of an Epidemic or Endemic nature, have contributed to diminish the

rate of mortality below that of many preceding years.

The accumulation in the Infirmaries of the ^{Admission of Infirm} Asylum of cases, where from old age or exhausting Diseases of the Brain the vital powers are reduced to a very low state, and where the nature of the disease precludes all hope of recovery, are daily on the increase. Although the mild state of the season has hitherto arrested the certain progress of disease in these paralyzed and enfeebled cases,—still, from the nature and character of the complaints from which the Patients suffer, life cannot under any circumstances be much farther prolonged.

For violent and curable afflictions of mind Asylums are fit and proper receptacles, but for aged and diseased paupers, where Debility and Paralysis result from old age alone, Lunatic Asylums never could have been intended.

For such cases, infirm wards in Workhouses ^{Violent Lunatics.} seem much better adapted, in which, by association with others in a similar state of harmless imbecility, much better protection can be obtained than in the wards of Lunatic Asylums, where violent Lunatics must necessarily be mixed with them.

Although such facts are evident, still numerous cases are admitted into this Asylum, when the only treatment required is protection and sufficient food, and where space, which might be used for curable cases is occupied.

During the past year many of the Lunatics under treatment have exhibited an unusual degree of violence, frequently resulting in attacks upon the attendants in charge of them.

Amusements.

The large number of upwards of 100 Epileptics in the Asylum may to a certain extent account for these outbursts of excitement. In no instance has coercion or restraint been used to quell such disturbances, and it has only been by the exercise of great forbearance and patience on the part of the attendants in charge, that no accidents or injuries have resulted.

The Periodical Amusements, such as theatricals, concerts, dances, out-door fetes, games, and country walks have been persevered in, with a success that is very gratifying.

Occupation.

Under judicious restrictions, and by not too frequent repetitions, such recreations materially assist in promoting recovery and induce cheerfulness in depressed and melancholy cases. To shew the manner in which good results from this system of treatment, it is observed that rarely does an attack of Epilepsy occur to those present at exhibitions, whether in-door or in the open air ; although at other times these Lunatics are daily and hourly attacked by fits of a severe and dangerous character.

Much as this mode of treatment conduces to recovery, still it is of far less value or importance than that of employment, more especially when in the open air.

Out-door occupations, carried out as far as the Lunatic's mental and bodily state permit, are found to contribute more than any other treatment towards recovery.

On an average, 195 Males are daily employed, most of them in the cultivation of land or at the Farm, and the great improvement which results to

the bodily powers by such employment, reacts beneficially on the intellect and general mental state.

The attendances at the School have been carried out with regularity ; and the services at the Chapel have been attended by congregations varying from 300 to 350 in number.

Attendance at Chapel and School.
The Rev. J. H. Theodosius, the Chaplain, has shewn great punctuality and zeal in the performance of his duties ; not only in the performances of the services in Chapel, but in the visitation of the sick and the administration of the Holy Communion.

The Officers and Servants of the Asylum have at all times since last Report given satisfaction, and have contributed their services cheerfully in forming a band of instrumental performers, and in carrying out the different performances and amusements throughout the year.

For the valuable services and assistance afforded by them I express my acknowledgment ; and for the active support given to me at all times by the Committee, and for the confidence shewn, I feel most grateful.

I am, my Lords and Gentlemen,
Your very obedient Servant,

Mark Noble Bower.
